

Parts of a Plant and Their Functions

Match each plant part with its simple function.

Plant Parts	Functions
 Fruit	Make food for the plant using sunlight.
 Roots	Hold the plant up and carry water to all parts of the plant.
 Flower	Grow into a new plant.
 Stem	Attracts insects and helps in making seeds.
 Seeds	Contains seeds and protects them.
 Leaves	Take in water and minerals from the soil.

Think and Learn

1. Which part of the plant makes food for the plant?

Answer: _____

2. Which part of the plant helps the plant grow into a new plant?

Answer: _____
