

# Plants Needs and Their Functions

---

Match each plant need with a simple explanation of how it helps a plant.

Water

It gives plants the food they need to grow strong and healthy.

Sunlight

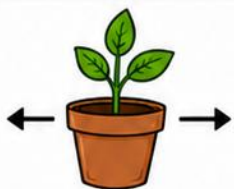

It helps plants make their own food and gives them energy.

Air

It gives plants room to grow their roots and leaves.

Space

It helps plants take in carbon dioxide to make their own food.

Nutrients

It helps plants grow, keeps them strong, and carries food inside.
